Review of: "A Methods Note on Remote Sensing Platforms and Large-Scale Archeological Impact Assessments (AIA) in the Philippines"

Ilaria Cacciari[1]

1 Italian National Research Council

1) "barangay", since this word is typical of the Philippines and the common reader may not know it, I suggest adding a note to explain its meaning.

2) "The targeting of areas for test pit excavation .. a predictive model for archeological sites", which predictive model? please define its name and possibly explain it.

3) "There is also the possibility that known sites are composite sites that must be further investigated", I suggest changing this sentence since in most archaeological cases we are dealing with multilayers (composite sites).

4) "It should be stated at the outset that formal training", please explain clearly what the train consist of.

5) the Discussion section shuld be improved. Furthermore, it might be interesting for the reader to see some results.
