

# Review of: "The Global Impact on Health of Dental Infections and Antibiotic Resistance:A mini Reveiw"

Giovanni Nicolao Berta<sup>1</sup>

<sup>1</sup> University of Turin

**Potential competing interests:** No potential competing interests to declare.

In my opinion, the review titled "The Global Impact on the Health of Dental..... " has some problems to solve. In particular, the author should improve the review as follows:

- It is not well organized by a flow of information,
- It is inconclusive,
- It adds nothing to what is already known by clinicians.

Of minor importance:

1. **Introduction section:** Lines 4 and 12 contain identical sentences.

**Page 4:** It is recommended to enhance the section on the prevention of dental caries and periodontal diseases. Exploring the application of saliva for the cost-effective identification of biomarkers might be of significant interest. This analysis holds the potential to disseminate the knowledge of preventive measures against dental caries and periodontal diseases.

**Antibiotic resistance section:** To enhance the clarity and facilitate comprehension in this section, it is suggested to incorporate one or more images or tables. This visual aid will contribute to better organization and understanding of the content.

**Antibiotic resistance section:** The authors could enhance this section by investigating whether there have been descriptions of oral pathogens that exhibit resistance to antibiotics typically reserved for hospital use, such as carbapenems.
