# Fontolizumab

National Cancer Institute

## Source

National Cancer Institute. *Fontolizumab*. NCI Thesaurus. Code C87765.

A humanized monoclonal antibody directed against interferon-gamma (IFN-g) with immunomodulatory activity. Fontolizumab binds to and prevents the activity of IFN-g. This leads to a suppression of IFN-g-mediated signaling and thus a suppression of IFN-g immune related responses. IFN-g is a cytokine often overexpressed in various autoimmune diseases.
