# Rebimastat

National Cancer Institute

## Source

National Cancer Institute. *Rebimastat*. NCI Thesaurus. Code C1875.

A sulfhydryl-based second-generation matrix metalloproteinase (MMP) inhibitor with potential antineoplastic activity. Rebimastat selectively inhibits several MMPs (MMP 1, 2, 8, 9, and 14), thereby inducing extracellular matrix degradation, and inhibiting angiogenesis, tumor growth and invasion, and metastasis.
