Potential competing interests: No potential competing interests to declare.

This paper thoroughly examines REDD+ programs in Cambodia, explaining the country's environmental policy and shedding light on the current forest situation. REDD+ aims to significantly reduce greenhouse gas emissions, offering valuable insights into the subject.

The article provides a detailed explanation of REDD+ programs, Cambodia's environmental policies, and the current state of its forests, deepening our understanding. The research methodology is well-explained, using ethnographic field surveys and a multi-dimensional approach to strengthen the reliability of the conclusions.

Suggestions for the author:

1. The author could enhance the analysis by incorporating viewpoints from proponents of the project, thereby achieving a more balanced and credible assessment..
2. Adding more bibliographic references would enhance the text's credibility
