Potential competing interests: No potential competing interests to declare.

Abstract - "This paper discusses methodologies, not whether
SMEs should acknowledge digitalisation but how digital economies can enhance their practicality while immediately resolving the issues." Simplify!

Introduction - The motivation related to the topic is not strong. Where is the information of SMEs in Malaysia in relation to the digital economy. The objective written is not strongly supported by the description in the introduction.

Introduction - The First sentence in the introduction needs a citation to support it. The 2nd sentence of the objective is nothing to do with an objective. Q2 is too general, should SMEs in Malaysia.

Review of literature - The first sentence of 2.1 need a citation(s) to support it. Still 2.1 "IR4.0. One of the elements of the IoT is the digital economy itself". Wrong statement! How come the digital economy is an element of IoT?

Still 2.1 "Many new infrastructures such as 5G, Blockchain, and Artificial Intelligence (AI) are being developed to supplement …." AI is not an infrastructure!

2.2 "For example, online deliveries for food and groceries to human social apps are now available." read the sentence carefully "human social apps" ?

You need to provide the sources of all figures. Make the figures high resolutions!

Please separate discussion and conclusion. The discussion is shallow, only touch "what". You have to expand on "why" and "how".
