Potential competing interests: No potential competing interests to declare.

- 1-The abstract section should contain some results in quantitative form.
- 2-Figures of the devices used are required, such as the extrusion, tension, compression, hardness, and impact devices.
- 3- Are there any correlations between the mechanical and wear properties, and how do they relate to the silicon carbide reinforcement?
- 4-The quality of the images needs to be improved. Almost all the figures, along with the SEM images, appear very blurry. Please provide clear and high-resolution images with suitable indications/marks.
- 5-There is no scientific novelty in the contribution. The novelty of the manuscript should be mentioned in the last paragraph of the introduction section.
