Borderline Exocrine Pancreatic Neoplasm

National Cancer Institute

Source

National Cancer Institute. *Borderline Exocrine Pancreatic Neoplasm*. NCI Thesaurus. Code C5716.

A group of epithelial neoplasms that arise from the exocrine pancreatic tissue and have the potential to evolve into invasive malignant neoplasms. This group includes the pancreatic intraepithelial neoplasias, non-invasive pancreatic mucinous-cystic neoplasms, pancreatic intraductal papillary-mucinous neoplasms, and pancreatic intraductal tubulopapillary neoplasms.
