Cresidine

National Cancer Institute

Source

National Cancer Institute. *Cresidine*. NCI Thesaurus. Code C29847.

A white, crystalline aromatic amine that is soluble in organic solvents and emits toxic fumes of nitrogen oxides when heated to decomposition. p-Cresidine is exclusively used as a chemical intermediate in the manufacture of dyes. p-Cresidine is reasonably anticipated to be a human carcinogen based on evidence of carcinogenicity in experimental animals. (NCI05)
