Potential competing interests: No potential competing interests to declare.

1. Abstract: This should be explained in the research methods. It would be nice to add an explanation of the contribution of this research. What is the contribution of the research that you are making to the field of science, and what are the suggestions for further research?
2. The introduction should focus on stated reference studies, gap analysis, and objectives. Reference studies are not well stated. This reference study explains what studies/research have been tried to solve the problem.
3. The method does not focus on explaining the stages carried out or the framework/platform/algorithm/equation used in the research.
4. Results and Discussion

Up to this point, only the results of the research have been presented, while the concrete discussion has not yet been seen. It is better to add a concrete discussion regarding the results of the research; if there is a comparison with previous research or support from previous research, it will be even better.

1. The conclusion should consist of:
  - Core results of research findings/answers to research objectives.
  - Implications and limitations of research
  - Research suggestions.
1. References should consist of at least 15 of the most relevant and up-to-date sources. 80% of references must be from reputable international journals published in the last 5 years.
