Congratulations to the authors for writing on cutaneous leishmaniasis, a neglected tropical disease. I would like to suggest the following few points:

1. In the search strategy, mention the exact period.
2. The authors shall mention if the trend analysis for study variables was statistically significant or not.
3. It will be interesting to analyze if there is any link between the number/trend of publications from a region or country and the burden of CL.
4. Authors mentioned, "Mapping of performance of authors and organizations indicates that North American and European countries are leading research in leishmaniasis despite having a low burden of the diseases." Clarify if this includes research undertaken in that region excluding co-authorship.
5. Analyse the type of articles, particularly original, according to country or region of author.
6. Summarize results on the objectives of the article in the conclusion. Regards,
