

# Review of: "Exchange Rate Pass-Through and Inflation on Unemployment in Nigeria"

Regina Niken Wilantari<sup>1</sup>

<sup>1</sup> Universitas Jember

**Potential competing interests:** No potential competing interests to declare.

**Relevance:** Your article explains the relationship between exchange rate fluctuations, inflation and unemployment in Nigeria quite well. You also demonstrate the relevance of your research by referring to the Phillips Curve hypothesis as it applies to Nigeria. However, you can increase the relevance of your article by providing more specific background on Nigerian economic and social conditions that influence or are affected by exchange rate fluctuations. For example, you could name several factors that cause exchange rate fluctuations in Nigeria, such as political instability, dependence on oil exports, or government intervention. You can also mention some of the impacts of exchange rate fluctuations on Nigerian society, such as poverty, inequality, or migration.

**Completeness:** Your article includes all the important elements of the research, such as background, aims, methods, results, discussion, conclusions, and suggestions. You also provide quite detailed information about the data, models, and analysis techniques used. However, you can increase the completeness of your article by providing some additional relevant information, such as sample size, research period, or control variables used. You can also present your research results more clearly and concisely, using numbers, tables or graphs if possible. You can also mention some limitations or limitations of your research, such as assumptions, measurement errors, or generalizations.

**Readability:** Your articles are written in clear, concise, and consistent language. You use simple and concise sentences, and avoid using ambiguous, excessive or non-standard words. However, you can improve the readability of your article by correcting some existing grammar, spelling, or punctuation errors. For example, you could change "the study used annual data" to "the study uses annual data", or change "the findings have implications" to "the findings imply". You can also use appropriate conjunctions or conjunctions to connect related sentences, such as "therefore", "however", or "in addition". You can also use paragraphs to separate parts of your article, such as introduction, literature review, methods, results, discussion, conclusions, and suggestions.

**Conformity:** Your article complies with academic standards and prescribed writing formats. You use a formal, objective, and scientific writing style. You also follow general article writing rules, such as length, sequence, and tone.

Overall, your article is quite good and interesting to read. You have demonstrated that your research has clear objectives, valid methods, significant results, and important implications. However, you can still improve your article by considering the input I provided above. I hope my review and input can help you improve your article.
