Peptidyl-Prolyl Cis-Trans Isomerase D

National Cancer Institute

Source

National Cancer Institute. *Peptidyl-Prolyl Cis-Trans Isomerase D*. NCI Thesaurus. Code C118133.

Peptidyl-prolyl cis-trans isomerase D (370 aa, ~41 kDa) is encoded by the human PPID gene. This protein plays a role in the isomerization of imidic peptide bonds.
