Allogeneic Dendritic Cell-Myeloma Idiotypic Vaccine

National Cancer Institute

Source

National Cancer Institute. *Allogeneic Dendritic Cell-Myeloma Idiotypic Vaccine*. NCI Thesaurus. Code C61434.

A cell-based vaccine composed of allogeneic dendritic cells pulsed ex-vivo with an autologous myeloma idiotype with potential antineoplastic activity. Upon administration, allogeneic dendritic cell-myeloma idiotype vaccine may stimulate the host immune system to mount a specific cytotoxic T-lymphocyte (CTL) response against myeloma cells, resulting in cell lysis.
