**Potential competing interests:** No potential competing interests to declare.

#BetterPoster highlights the important topic related to creating accessible conference posters. The idea of the article is significant, but the paper is not presented correctly. It would be good to clearly present the contributing moments of the authors, how their approach differs from other approaches to creating posters, how different groups of people with special needs interact with the poster. #BetterPoster does it only apply to posters in electronic format or also to printed posters?
