Potential competing interests: No potential competing interests to declare.

Pediatric hematology/oncology is a medical specialty focused on diagnosing and treating blood disorders and cancers in children. This field encompasses many conditions, including leukemias, lymphomas, solid tumors, bleeding and clotting disorders, and bone marrow failure syndromes. Pediatric hematologists/oncologists work closely with a multidisciplinary team of healthcare professionals, including nurses, social workers, psychologists, and radiation oncologists, to provide comprehensive care for their young patients. Treatment options may include chemotherapy, radiation therapy, bone marrow/stem cell transplantation, and supportive care measures such as blood transfusions or medication to manage symptoms.
