Dear editor

Thanks for inviting me as a referee for the manuscript Synthesis and Antibacterial Screening of Cefradine Schiff Bases and Their Metal Salts, the manuscript is well written, results presented are quite interesting and are useful for the readers, the authors have synthesized Cefradine bases schiff bases, characterized through state of the art spectroscopic techniques. The spectral analysis confirm the proposed structures, the synthesized schiff bases were further treated with the transition metal salts to yield transition metal complexes. The authors have further checked the antibacterial activity of the transition metal complexes, the results are quite promising. However the results are not supported by the relevant citations, I suggest the author should support their work with the relevant references, Overall the quality of the manuscript is good and I recommend it for publication

thanks
