Histone H2B Type 1-C/E/F/G/I

National Cancer Institute

Source

National Cancer Institute. *Histone H2B Type 1-C/E/F/G/I*. NCI Thesaurus. Code C162934.

Histone H2B type 1-C/E/F/G/I (126 aa, ~14 kDa) is encoded by the human H2BC4, H2BC6, H2BC7, H2BC8 and H2BC10 gene. This protein is involved in histone-mediated transcription regulation, DNA repair, DNA replication and chromosomal stability.
