T(8;14)(q24;q11)

National Cancer Institute

Source

National Cancer Institute. *t(8;14)(q24;q11)*. NCI Thesaurus. Code C36347.

A chromosomal abnormality consisting of the translocation of 8q24 with 14q11, which juxtaposes the c-MYC gene with the gene for the T cell receptor alpha chain resulting in overexpression of c-MYC in T cells bearing the translocation.
