Potential competing interests: No potential competing interests to declare.

By thoroughly reviewing your paper titled "CNN-MRI Detection of Fatty Infiltration Rotator Cuff and Infraspinatus Muscle Atrophy in Shoulder Pain Patients," I would like to suggest the following points:

1. It will be fine if you don't provide any code, but if you want to discuss it briefly with equations.
2. Explain your methodology and results sections separately with equations, charts, graphs, and pictures. I haven't seen any proper methodology and results section.
3. For improvement of results, extract more textural features and patterns by applying different extraction algorithms.
4. Make a comparison section with other techniques and provide your work's significance by comparing your work with other applied methods.
5. Explain the conclusion section more.
6. Add the latest paper references.
