O-Anisidine Hydrochloride

National Cancer Institute

Source

National Cancer Institute. *o-Anisidine Hydrochloride*. NCI Thesaurus. Code C44426.

A pink to yellow colored, liquid, aromatic amine with an amine-like odor that emits toxic fumes of nitrogen oxide when heated to decomposition. o-Anisidine hydrochloride is used in industry as a chemical intermediate in the production of dyes and pharmaceuticals. Exposure to this substance irritates the skin and can cause headaches, vertigo, and affects the blood. o-Anisidine hydrochloride is reasonably anticipated to be a human carcinogen. (NCI05)
