Source

National Cancer Institute. *CRDH, Rat Strain*. NCI Thesaurus. Code C14398.

Non-insulin-dependent overt diabetes: blood glucose 384 \pm 134 mg/dl (plasma insulin at 60 min following intragastric glucose load 83.3 \pm 10.2mU/mL) and hypertension blood pressure 176 \pm 8mmHg. There was severe diffuse diabetic glomerulosclerosis and severe hypertensive changes in arteries and arterioles characterised by fibrinoid necrosis and/or onion skin lesions as well as smooth muscle hyperplasia. Myocardial changes were prominent, with foci of ischemic necrosis and hyperplastic vascular changes.
