**Potential competing interests:** No potential competing interests to declare.

Very good presentation which follows all aspects of article writing. The abstract, introduction, background of the study, methodology, and findings have been written properly and contain sufficient information.

But somehow there are areas where clarity is needed; that is, for the literature review, besides mentioning the relationship the articles cited have to the study, writers should write a conclusion for each subtopic that concludes their gap, relationship, and the further study that should be done.
