Potential competing interests: No potential competing interests to declare.

This review contains important information about the application of ISO 9001 and similar quality management systems in architectural practices. However, it would be good for integrity to make some improvements and changes in the flow of the review. For example, other quality management system approaches mentioned after the discussion section could be included in the discussion section and given in comparison with ISO 9001. In addition, risk and opportunity management, known as the most important revision of ISO 9001:2015, should be mentioned, and a perspective explaining its importance in terms of architecture should be added.
