This is an excellent publication that provides an overview of numerous telemedicine uses during the COVID-19 pandemic. However, there may be certain areas that might be improved:

- It would be fascinating to investigate the impact of the pandemic on an already established practice.
- An investigation on how tele-education harms medicine.
- The motivation for this manuscript is weak. It should be stated more clearly to give the study a sense of purpose and scientific weight.
- It is also ideal to indicate the time period of publications included in the review.
- The methods section is insufficiently detailed.
