Reviewer comment on 'The Effect of Visual Arts Educative Practices on Social Functionality in Patients with Schizophrenia'

The author should add information about the association between visual art and social functionality of schizophrenic patients. Is there any theory that supports or explains this context?

This study's objective: *to answer whether visual arts practices made by schizophrenic patients had a positive or negative effect on the social functionality of these patients.*

How can visual art education enhance oral medication effectiveness (to improve social functionality in schizophrenia patients)? What is the mechanism?

How did the author develop the questionnaire?

The author should add information about visual art education (the script and the education material).

The author should add information about the education material development.

Results

Which educational material domain improves social functionality in schizophrenia patients?
