Dear editor,

Thank you for giving me this opportunity to review. A very attractive commentary with the classic theme of continuity of care, which is still one of the main pillars of effective and efficient primary health care.

The author has tried to provide mechanisms to improve continuity in care, and around them, evidence has been presented regarding the effectiveness of each mechanism. On the other hand, the facilitators are also mentioned, which can be a guide to benefiting from the consequences of any proposed mechanism.

It seems that this manuscript is of sufficient quality to be published as a commentary.
