

Review of: "Time evolution and convergence of simple migration models"

Entsar Abdel-Rehim

Potential competing interests: No potential competing interests to declare.

Regarding the

paper having the title: Time Evolution and Convergence of Simple Migration Model.

The paper has the reference no 46M58H

%

\newline

I have some comments

First: The title is too broad. It must be informative. I recommend the author change the title to: The mathematical model of the gravity and the radiation models estimating the bilateral migration

%

Second: The author unneeded lines at the introduction section in Deutsch. This part has to be moved to the references section. The author has to translate it to English only.

%

Third: the conditions on d_{ik} at equation [4] must be written on a separate line not under the summation symbol.

%

Fourth: the author should add some lines on the introduction to explain the origins of the equations [1--8] historically.

%

Finally: I recommend the author do these changes and resubmit the paper
