Fusobacterium naviforme

National Cancer Institute

Source

National Cancer Institute. *Fusobacterium naviforme*. NCI Thesaurus. Code C114252.

A species of obligately anaerobic, Gram negative, rod shaped bacteria assigned to the phylum Fusobacteria. This bacteria is non-spore forming, indole positive, non-fermentative, and characteristically produce butyrate as a major end product of its metabolism. *F. naviforme* has been isolated in human clinical samples and may cause infections in humans.
