SIR

General Comment: The article needs critical corrections in terms of technical as well as English.

Technical Comments :

1. Discussion regarding phytochemical extraction procedure and analysis has to be included
2. Methodologies have to be briefed in detail
3. The author has mentioned "unfortunately" in the text for two compounds. Authors can emphasize the significance of the compounds and relate the concept to the text.
4. More critical explanations with graphical/tables/figures of antimicrobial studies are needed in the results and discussion
5. The discussion part has to be enhanced in the article

Overall comments: The article may be accepted after revision of the comments critically
