Potential competing interests: No potential competing interests to declare.

1. Results and conclusion: The section devoted to the explanation of the results suffers from the same problems revealed so far. Your storyline in the results section (and conclusion) is hard to follow. Moreover, the conclusions reached are really far from what one can infer from the empirical results.
2. The discussion should be rather organized around arguments, avoiding simply describing details without providing much meaning. A real discussion should also link the findings of the study to theory and/or literature.
