Potential competing interests: No potential competing interests to declare.

The author excellently summarised the concepts of systems theory and how these concepts may be applied to biological systems using QM. What are the flaws in the original concepts of systems philosophy - "The whole is more than its parts."

My observations are as follows:

1. Abstract must be written in the third person and precisely mention what is included in the paper.
2. It will be better if the final conclusion is also added.
3. Give some more insight about the systems' concepts useful for biological systems.
