Potential competing interests: No potential competing interests to declare.

General comments to the authors:

- 1- This study lacking novelty and adding nothing new to the already body of literature.
- 2- Small non-probability sample size and sampling methods, sample calculation is not there, hence Generalization is questioned.
- 3- How the authors selected their participants?
- 4- The data collection tool: was it reliable and valid or not? was there any pilot testing?
- 5- The administration of the data collection tool: Who, in which language etc.,
- 6- Statistical analysis is not complete: express the scores in Median and (inter-quartile range), Non-parametric tests of significance, use appropriate graphs to display data.
