Potential competing interests: No potential competing interests to declare.

A good original paper, but it needs to be in detail, especially on how you use the framework to be utilized in your study.

"SFG has four main theoretical assumptions about language. These are: language use is functional, its function is to make meanings, these meanings are influenced by the social and cultural context in which they are exchanged, and lastly, the process of using language is a semiotic process, a process of making meanings by choosing. As such, "language is a resource for making meaning, and meaning resides in systemic patterns of choices" (Halliday & Matthiessen, 2015)" - I do not see the framework presented connect with the findings.

How do the findings relate to SFG?
