INHBB wt Allele

National Cancer Institute

Source

National Cancer Institute. *INHBB wt Allele*. NCI Thesaurus. Code C52048.

Human INHBB wild-type allele is located within 2cen-q13 and is approximately 6 kb in length. This allele, which encodes inhibin beta B chain protein, is involved in the both the promotion and inhibition of follitropin secretion in the pituitary gland. It also plays a role in the regulation of diverse cellular functions.
