Potential competing interests: No potential competing interests to declare.

The entitled "Visualization of Home Security Sensor System Based on IoT Server" is an very interesting research area, but this article need major correction.

1. The author should mention the objective of this work, its motivation, and the contribution of the work in the introduction section.
2. How all sections throughout the article are managed should be mentioned in the introduction section.
3. In the Literature survey section, there should be a discussion about the existing work with its advantages and disadvantages, not about hardware or software used for developing the proposed methodology.
4. In the proposed methodology, what type of network communication protocol are used for developing IoT gateway and how this sensor data are getting transmitted through IoT gateway to a cloud server should be discussed in a brief and if this transmission is using anytype of aplication protocol or not author explain this in a brief.
5. The proposed methodology experiments outcome should be validated.
6. The author should also perform the comparative analysis and statistical analysis between the proposed work and existing work in terms of system performance, storage, cost, and optimization.
