The study is a good read. However, please consider the following comments to further improvement. In the abstract, provide 1-2 sentence background of the study. The introduction provided a comparison between digital literacy and digital competency which are sometimes used interchangeably. However, this part could be improved more by discussing specific uses of purposes of ICT and how teachers and students could benefit from these. The discussion flow of the literature review part is commendable. The findings are discussed appropriately and the conclusion is not a repetition of the findings, but a strong call to action. For language use, integrate uniform and proper capitalization of words in the paper. Recheck some sentences which may lack verbs or objects to complete the thought.

Overall, the paper needs minimal revisions to be published more likely in a good journal.
