Potential competing interests: No potential competing interests to declare.

Although the number of cases is small, the authors' effort in writing about biliary complications is valuable due to the difficulty and complexity of the liver transplant procedure.

The article contains a few errors in English spelling, which need to be corrected.

On the other hand, there is no information about ethical issues in the article, and these should be provided.

When presenting the data about the patients, tables should be included in the article, and data should be presented not only in patients with biliary complications but also in other recipients.

Not giving references in the introduction is not a very appropriate approach.

The discussion section is long but shallowly written. It is necessary to make more comparative comments about the literature.
