

Review of: "Factors influencing women's decision choosing a public or private health facility for tuberculosis (TB) services: An analysis of Nepal demographic and health survey data 2016"

Samreen Sadaf Khan

Potential competing interests: No potential competing interests to declare.

Well written manuscript with good findings that will add to existing knowledge related to TB. All sections are explained with minute detailing specially the methods and result section as well as discussion section. If in discussion section in paragraph starting with "we detected dose response" probable explanation why younger not seeking care at public health facility along with social stigma can be provided. Also in conclusion section it is written as social stigma was found as major influencing factor but in the analysis table it was not included. Kindly include it in the analysis table.
