# Review of: "Exchange Rate Pass-Through and Inflation on Unemployment in Nigeria"

Jama Mohamed[1]

1 University of Hargeisa

Dear Author, my suggestions for improving this manuscript are as follows:

The introduction section mentions the importance of exchange rates, inflation, and unemployment but fails to clearly articulate the research gap or the specific problem the study aims to address. The time period alone is not sufficient. You should consider additional variables or novel methodology.

You should break the materials and methods into suitable headings such as data sources, Empirical models, etc.

Why you have considered both symmetric and asymmetric models (ARDL and NRDL)? You should consider either of the two.

The rationale behind choosing the Nonlinear ARDL model and SVAR techniques could be further justified, explaining why these methods are suitable for investigating the research questions.

The rationale for selecting the ARDL (4, 4, 4, 4, 2) model is not sufficiently explained. The discussion should provide insight into why this specific lag structure was chosen and how it aligns with the underlying economic theory.

More specific and actionable policy recommendations based on the study's findings should be considered to enhance the practical relevance of the research.
