Potential competing interests: No potential competing interests to declare.

Good effort in completing this draft manuscript. The following are some comments to keep on improving:

- a. Ensure the title clearly demonstrates your dependent, independent variables, and population.
- b. The abstract lacks critical information in the methodology. Highlight significant findings from your study in the abstract.
- c. Methodology: Did you justify the selection of the quantitative approach, and did you create the questionnaire or adapt or adopt it from an established questionnaire?
- d. What are the procedures of your study?
- e. What instruments were used in this study?
- f. What about participants in this study? Nothing was explained in the method sections? How many participants, what formulas were used to gather samples, what sampling technique was employed?
- g. Ensure that the discussion section attempts to answer your study hypotheses.
- h. Relate findings with the TAM model and how it can support readers' understanding of the study's findings.
- i. What about study limitations?
- j. What can be done in future studies? Recommendations?

The methods section needs more information to add clarity to your study. Good luck.
