Review of: "Determining Affinity of Social Network using Graph Semirings"

Jihong Wan[1]

1 Guangdong University of Technology

This article takes Facebook as an example and proposes a method to determine the stability and affinity of connections between different social groups. However, the article has the following issues.

1. The motivation is not clear, and the research background is not thoroughly explored.

2. The innovation is insufficient.

3. The article does not provide the proposed algorithm. Please provide a formal expression of the method and present the algorithm in this article.

4. How to demonstrate the effectiveness and rationality of the method without experimental proof of its results. The authors are asked to add some experiments.

5. Insufficient literature research, please add more relevant and latest references.

6. The quality of the article needs to be improved.
