Cerebellar Hemangioblastoma

National Cancer Institute

Source

National Cancer Institute. *Cerebellar Hemangioblastoma*. NCI Thesaurus. Code C5146.

A histologically benign tumor, usually cystic with a vascular mural nodule, that is most often found in the cerebellum though it has been reported at other sites within the neuraxis. It is associated with von Hippel-Lindau disease (VHL gene located on chr 3p25-26).
