Moderately Differentiated Ovarian Sertoli-Leydig Cell Tumor

National Cancer Institute

Source

National Cancer Institute. *Moderately Differentiated Ovarian Sertoli-Leydig Cell Tumor*.
NCI Thesaurus. Code C39968.

A Sertoli-Leydig cell tumor of the ovary characterized by the presence of spindle-shaped gonadal stromal cells and Sertoli cells, some of which are atypical. Leydig cells are also present forming clusters at the periphery of the cellular aggregates. Metastases have been reported in a minority of patients.
