

Review of: "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites"

R. Kousik Kumaar

Potential competing interests: No potential competing interests to declare.

1. In the abstract, it is essential to emphasize the originality and uniqueness of the research.
2. In the introduction section, augment the citation coverage by incorporating more relevant references, while minimizing redundant explanations of well-established concepts.
3. In the Materials and Methods section, the initial paragraph preceding section 2.1 should be succinctly presented, supported by appropriate citations.
4. The methods employed for assessing mechanical properties are excessively detailed and lack efficiency in their presentation and discussion.
5. The results and discussion section requires improved clarity and elaboration for a more comprehensive understanding.
6. Ensure appropriate citation for relevant images, where applicable. Additionally, address the need for improved resolution clarity in certain pictures.
7. The current paper appears to primarily present experimental findings without sufficiently articulating the novel contributions of the research. There is a noticeable absence of a clear research focus, diminishing the perceived depth and significance of the study. Consider enhancing the emphasis on the research's unique contributions and elevating its overall importance.

I recommend that the authors reassess their work, placing a stronger emphasis on injecting research novelty and providing more in-depth research declarations. This will enhance the overall significance and impact of the study. A substantial revision is necessary to uphold the quality of the research.
