Potential competing interests: No potential competing interests to declare.

The manuscript needs minor English revision.

Please list the novelty and benefits of the current study.

In Materials and Methods, in *Acinetobacter baumannii* (AB), were the bacterial strains isolated only using biochemical assays? What about differential culture media, microscopy, molecular assessments, and other identification/characterization techniques?

In Materials and Methods, in *Acinetobacter baumannii* (AB), were the bacteria susceptible or resistant to the highlighted antibiotics?

In Materials and Methods, in various phage assessments, which standard bacterial strain was used?

In Materials and Methods, all materials and devices must be addressed with their manufacturers and countries of origin.

In Materials and Methods, how many times were the phages purified?

In Materials and Methods, only two methods/protocols are referenced!

In Figure 1, the caption must include the magnifications of the micrographs. Furthermore, scale bars are necessary.
