

Review of: "Skilling Up for Tomorrow's Cities: The Workforce of Smart Cities"

Salvatore Moccia

Potential competing interests: No potential competing interests to declare.

Currently, more than three quarters of companies in the EU report difficulties in finding workers with the necessary skills to meet job requirements, and the latest figures from Eurostat suggest that only 37% of adults undertake training on a regular basis. Thus, having the relevant skills will undoubtedly empower people to successfully navigate labour market changes and to fully engage in society. However, it's not just a matter of having the "relevant skills"; it is also a matter of knowing in advance the labour market needs and developing the necessary education paths to prepare future skills. From this perspective, this paper is interesting because it tries to forecast future competencies and job profiles. From a pure scientific point of view, it needs to be revised.
