Potential competing interests: No potential competing interests to declare.

The subject of the article is good and creative but:

1- The title should be enhanced by avoiding the revolutionized words that are not suitable for a scientific article, which tends to use wise words. Revolutionized words are suitable for games, movies, or the advertising of products, not for scientific articles.

2- The word "Precision Agriculture" in the title, I think, is not correct. I think it should be "Revolutionizing Agriculture Precision Using Drone-Based Imaging by Fuzzy Intelligent Algorithms."

3- The title is not suitable for 2024 because it is generic and should be specified. Which fuzzy intelligent algorithms???

4- The article touches on SW development, so you should provide more articles concerning this, such as:

The work can be of scientific interest since it provides elements of novelty to the research field. Therefore, it should be revised and improved in its quality.
