# Myeloid Neoplasms with Germline ETV6 Mutation

National Cancer Institute

## Source

National Cancer Institute. *Myeloid Neoplasms with Germline ETV6 Mutation*. NCI Thesaurus. Code C151911.

Autosomal dominant familial thrombocytopenia associated with germline ETV6 mutation and hematologic malignancies. The hematologic malignancies reported are diverse, including myelodysplastic syndrome, acute myeloid leukemia, chronic myelomonocytic leukemia, B lymphoblastic leukemia, and plasma cell myeloma. Non-hematological neoplasms, including colorectal adenocarcinoma, have been also reported in affected families. (WHO 2017)
