Potential competing interests: No potential competing interests to declare.

Good article that highlights how to prevent and manage Long COVID. The authors may wish to highlight the following to make for a more robust article:

1. Leaky gut, toxic bacterial metabolites, and chronic inflammation as they affect the subject matter
2. More details into the mechanism of action of vitamin D and mannose
3. Discuss more robustly the implications of your findings on clinical practice
4. Any need for further research or clinical trials?
